

Avt 25 SECURING DEVICE

Designed, produced
and assembled in Italy

Beyond
your imagination!

Made in Italy
PATENTED

- ✓ *Advanced design & technology*
- ✓ *Supreme manoeuvrability & ergonomics*
- ✓ *Totally safe to use*
- ✓ *Precise frictionless action*
- ✓ *Quick & smooth release*
- ✓ *Extremely light, reliable, tough*
- ✓ *Completely rust & weatherproof*
- ✓ *Durable special webbing*

AVTENS
www.avtens.com

The Avtens AVT25 has added a new dimension to the securing of loads consigning all previous devices to the scrap heap where they belong.

This new conception combines simplicity with ultramodern technology, unrivalled functionability, excellent design and in addition it is easy on the eye. Avtens promises less problems and better holidays. The product is extremely light, quick, safe and easy to use. It will soon make you forget about all those tangled ropes, belts and stress enabling you to enjoy your precious time to the full.

Avtens™ is especially adapt in difficult professional circumstances and when safety is a priority: for example when it is necessary to immediately release rescue equipment and/or lifesaving devices. When danger threatens, situations become hazardous, secure measures must be instantly at hand, Avtens offers the solution. When you are responsible not only for yourself but the safety of others, don't worry AVTENS WILL NOT

LET YOU DOWN

FX Version: the answer to every eventuality is to have the device fixed to your boat or vehicle occupying a hitherto small-unutilized space ready for use. The device has optimal manoeuvrability in the most restricted of spaces, where it is also easy to install.

SA Version: ready for use in all circumstances, all you have to do is to make the strap form a loop around the load and the support to fix the load at the place of your choice. Keep it handy to use everywhere and anywhere for all your needs.

HOW IT WORKS

Marvellously simple to use this ergonomic jewel eliminates the familiar problems of obtaining the correct tension and importantly eliminates the risk of tangling or painfully trapping fingers both when loading and especially when releasing objects. Previously, with other devices, the tension of the belt that guaranteed security made releasing loads complicated and cumbersome. The patented Avtens™ system utilises the very same belt tension to assist the release mode with ease and safety, with one simple movement of the finger, release is immediate under all conditions. You will be pleasantly surprised how the control lever transforms its movements into the right tension for the job at hand, not only because of the reduced movement of the gearing teeth, but also because of the complete lack of friction or stops and starts in its movement.

A WORD ABOUT PRODUCTION AND QUALITY

The materials used in the production of the device are of the highest possible quality without any concessions to corner cutting.

The technopolymers utilized represent state of the art technology in metal replacement, some of these being employed in the aerospace industry due to those elevated mechanical properties combined with the elimination of problems caused by wear and friction. Stainless steel is used for the metal components. Personalized polyester webbing characterized by a superior resistance to wear and against fraying.

WHERE DOES IT WORK

It can be used anywhere and everywhere even under adverse weather conditions and physically challenging situations. On the deck of boats in calm or rolling seas, but also in the boot of a SUV or Four wheel drive, in your camper or even under the seat of your motorbike: exclusively depending on your imagination. Designed to answer your load securing requirements. With a light, easy to use Avtens in your pocket you've got a good friend always ready to give you a helping hand.
